

World Leader in Cyber Intelligence

Cyveillance provides the **people, process and technology to provide early warning of threats coming from the internet and social media across the globe.** Leading Fortune 500 companies and government agencies trust Cyveillance to provide the cyber intelligence required to protect their information, infrastructure and employees.

While perimeter security defends against attacks, companies need cyber intelligence to mitigate risks associated with threats actively being planned or exist outside the perimeter. Cyveillance collects publicly available data from the internet and social media and rapidly transforms it into cyber intelligence – not just data, links or search results.

Cyber Intelligence for Your Physical Security

Today's threats to the physical security of are often planned and organized online, but take place offline. The Cyveillance Physical Security Suite collects information from the internet and social media to deliver early warnings of threats to your employees, business operations and facilities. Examples of threats include boycotts, demonstrations and threats against your executives and employees.

Cyber Intelligence for Your Brand

Cyveillance Brand Security addresses threats found in social media and the internet. Unlike buzz monitoring solutions, Cyveillance Brand Security is solely focused on threats to the brand such as unauthorized use of the brand or negative commentary and issues that can impact a brand's reputation.

Cyber Intelligence to Protect Against Information Leaks and Fraud

Cyveillance Information Security and Fraud monitors the internet and social media to provide early warning of sensitive information disclosure, hackers attempting to compromise corporate systems and fraud schemes or attacks. Examples of threats detected include: exposed documents which contain proprietary or sensitive information, phishing, vishing, SMiShing, malware, and threats against network assets such as denial of service.

Cyber Investigations

There is a special web-based component to assessing nearly any issue or investigation conducted today. In order to enhance traditional investigative methods, Cyveillance Special Web Analytics Team (SWAT) provides a highly skilled, experienced team which can conduct web-based searches, investigations, due diligence and analysis quickly, efficiently and with the highest level of discretion.

Cyveillance protects today's top companies

A Fortune 50 insurance company saves billions by taking proactive steps based on advanced warning of potential legal action

A Fortune 100 financial services company identifies a vandalism suspect and prevents damaging acts planned for facilities in multiple cities

A global hotel chain detects an identity theft operation involving its job postings, leading to a halt in a large global money laundering and immigration fraud scheme

A Fortune 200 energy company stops a critical information leak, counters misinformation and identifies planned protests with online detection

Leading security and service providers including AOL and Microsoft rely on Cyveillance to help protect more than 30 million consumers from online threats

A leading credit management and identity theft protection provider relies on its OEM partnership with Cyveillance to proactively identify potential fraud risks and incidents that could affect millions of consumers
